

WHAT ARE THE BENEFITS FOR YOUR HOSPITAL?

From the growth and harvesting of fresh fruits and vegetables and an improved station environment to interactive displays explaining the benefits of healthy living, Energy Garden will help improve the health and well-being of local people. Energy Garden takes gardening to the 21st century with live interactive apps and games that patients and staff can use to address issues on health and nutrition. See the table below to see the many ways your hospital could benefit and get involved with the project through a partnership with Energy Garden.

FINANCIAL

Discounted electricity via lease of roof space for solar array

Our not-for-profit community benefit society will lease your roof space to house a solar array for 20 years. The clean energy generated will be supplied to your hospital at a discounted rate. For a hospital with round-the-clock energy demands this could result in substantial bill savings. Solar panels can also be installed on any under-utilised land.

Direct investment

Your hospital could choose to invest directly in the Energy Garden community benefit society and receive a reliable annual return of approximately 4%.

SOCIAL

Health and well-being

The gardens will not only enable communities to benefit from locally grown fruit and vegetables, but also provide valuable opportunities for health and well-being education via interactive displays. In addition, your hospital could become an Energy Garden 'hub' with its own gardening and renewable energy installation providing information on the importance of sustainability and healthy living.

Community

By engaging with local people and providing a sustainable income for community gardening on London's Overground stations, this project will foster a sense of community ownership and pride.

ENVIRONMENTAL

Energy Garden will contribute to environmental targets by generating clean energy, and creating green spaces and ecologically rich areas.

PROMOTIONAL

The Energy Gardens will be seen by thousands of Londoners every day. Your hospital will benefit from its association with this innovative project.

CSR

There will be opportunities for your employees to get involved directly through staff team building and volunteer days.

TECHNOLOGY

Energy Garden takes gardening to the 21st century with its live interactive notice boards called the Energy Bar. These real time communication hubs will inform local people when, where and what is happening in the local Garden and will also allow patients to communicate with one another through apps and games. The Energy Bar is an interactive active notice board where health information for patients and staff of hospital can put information use to address health issues like diabetes and nutrition. The Energy Bar will bring smart tech into the heart of daily interaction, helping in the development to make London a socially smart city.
